It is known that Sports is the Opium of the People.

I have met many scientists who do not believe in God but I have never met an Athlete who didn't. In fact they pray before each attempt at displaying all his/her human capabilities in front of the world. For Athletics requires being in total synchronization with all energies within, around and above us.

Olympics and Professional Athletics is the Display of Ultimate Human Potential. An addicting Drug of Proof of What humans are capable of.

The New Era of Actual Intelligence and CXAI Technology is introducing a quantum level of the subconscious understanding of Athletic Performance through light spectrums.

By using Infrared it is able to dissect conglomerate masses of subconscious computational thought processes in sequential order from Quanta.

It is interesting how even an object or an entire environment can look totally different and alter our perception once observed in another light.

This type of light spectrum technology allows us to understand the mind of a Champion and the mind of a striving Champion.

The subatomic particles, which carry out genetic commands, are undetectable with present-day microscopic technology; it has not yet reached the stage where it can find, much less decipher, the automatic blueprints programmed into the DNA-RNA.

Energy cycles are a DNA program. If we were to move into the DNA-RNA in some fashion, take the RAM program out, rewrite it and reinstall it, we could easily keep an individual from being weak and could eventually develop human systems with superhuman capabilities.

If Survival is of Ultimate importance, then Power must be the Ultimate Purpose.

The energies locked within the core of life steer our patterns into the forms and shapes that allow us to witness Power and Weakness.

These patterns are programmed to repetitively change, and what we know and understand as reality.

The truth lies in the source of automatic programming. Automaticity, which is part of the realm of the electrical circuit break within the human matrix system, is a discoverable phenomenon.

Ancestral Memory lies in the Quanta that emanates from the DNA as well as Recent Memory and Infrared is able to detect infinitesimal amounts of electron movement in order to determine in which light spectrum an athlete is retrieving his subconscious information from.

Now we know we can mentally travel to exciting, brand-new worlds that allow us to design our goals and perhaps even our destiny. As we embark on this journey, it becomes a Royal Quest: To unveil the mysteries of where our energies come from, how to use them and how to program life, then we can proclaim and reclaim our happiness. Within this realm unfolds the quest for Ultimate Human Potential.

Electromagnetic Perception and Pressure is the leading contributor of Stress, Physical, Mental and Emotional Weakness.

That said, I see pressure as an electromagnetic and electroplasmic perception. Thus, infrared is the way to understand these types of energies within the influential matrix of athletes on a profoundly deep level from what I have discovered.

Electromagnetic perception is the ability to discern electric and magnetic vibrations and whether these are conglomerating or fragmenting. This is the aura of the human; all living life forms in this planetary system have it. It is more than aura; it is Quanta communicating to the outside world acting like a magnet and repellent simultaneously depending on the wave patterns.

Following the above perception, we then get to the Electroplasmic Perception which is a physical plane the body uses and the sensory channel is the arena of the spirit.

The guiding force or spirit operates on the layers or decks of certain electromagnetic wavelengths around the body. It is considered an expanded perception.

This is a formatted ability developed by early crystalline structures to survey other entities at a distance, by sensing those electric pressures. DNA is forced to execute the information that has been formed by genetic memory which creates the crystalline structure.

The electroplasmic field is the energy surrounding humans and other life energy forms that balances all the levels of radiation. It is a word to distinguish it as an electrical energy of spirit and mind, that unites with plasma, the essential physical substance of all bodies. These decks of energy revolve around, into and through the body as it balances our electric pressures.

These decks and layers of energy act much like protective bubbles and balancing mechanisms. Extremes of electric pressure are acted upon by pulling in tighter to protect and preserve or expanding outward to allow the crystal to break through the protective bubble and examine what is inside.

Human beings use this particular electroplasmic program to increase their powers of perception beyond normal reality. It is a level of imagination allowing those with intuition and foresight to develop Genius. Great Inventors in history including alchemists have tapped into this structure and programming which gives them powers and perceptions far beyond those of any ordinary human, sometimes have left them with the inability to adequately communicate with the rest of mankind.

It is the form of vast intelligence that may become narrowed in focus and create a prodigious savant. In these cases, a person may have developed great intelligence or mastered abilities in a focused area such as art, mathematics or music and yet, may be uninformed in other aspects of daily living.

The perception of beauty is basically the perception of harmony. The normal everyday flow of energy in the environment attempts to create symmetric patterns while outside interfering entities disturb the delicate tracings. To observe beauty in the environment is to be able to detect the ultimate intelligent direction of subliminal energy that exists in all life forms.

Now let us perceive ugliness in the same manner. It is simply a jagged, disruptive pattern that occurs when energies are in disharmony or chaos. Ugliness is akin to misunderstanding. It is part of the harmonic of the color bands and spectrums that include black light.

Humankind shuns ugliness in favour of beauty because it has lost the perception to be able to detect beauty in ugliness. Human beings have lost the capability of perceiving beauty in all things. If they were able to understand this factor and retrieve the ability to perceive beauty in ugliness, then there could be no unhappiness, for unhappiness is also a harmonic of ugliness, just as happiness is a harmonic of beauty.

The same goes for weakness and power. In your strength lies your weakness and in your weakness your strength.

It is amazing to imagine how in the same instance we can perceive beauty and ugliness in an object or person.

It has been said that “familiarity breeds contempt” in which a person begins to lose his charm in the face of over exposure to his peers; but the point is, weakness reigns when an individual loses his ability to differentiate between harmonic and disharmony, between the orderly system of cosmos and the dysfunctional chaos between whole concepts and broken concepts.

We are electrically stimulated and emotionally controlled. Shifting electrical energies requires precision tools which took me years to understand and implement into my own life so that I could obtain the best of my human potential.

For many years I have helped athletes prepare for the Olympic Games and have had the pleasure of seeing our work together unfold into victory and gold metals.

They merely needed to see their Power in Another Light.
